

INTELLIGENT SOLUTIONS

**ITG**

Optimizing processes for the industries.

---

**ITG** is designed to support and optimize safety processes for operations and maintenance. Helping deliver quality methods and best practices for a safer, more reliable and efficient work environment.

---

## The challenges

To provide world class practices, industries have to consistently deliver high quality standards in service and products. In this environment fast and available information is key.

Process management requires tools to build quality standardized tasks and help provide a safe work environment, where information can be rapidly accesible. And - in our ever growing digital world - we have the opportunity to provide information *everywhere*.

Ensuring a streamlined operations process and maximizing workflow efficiency - while also enabling a safe work environment - industries need to provide tools which can standardize and allow for greater control through sophisticated information management.

---

## The solution

**ITG** streamlines the communications process and workflow of information. Using tools capable of creating bridges with existing systems and updating processes, it delivers information in a controlled environment, with MOC and UX at its core.

**ITG** enables high volumen of data to be captured, processed and stored with confidence. Offering *in situ* availability of information for faster and well informed decision making.

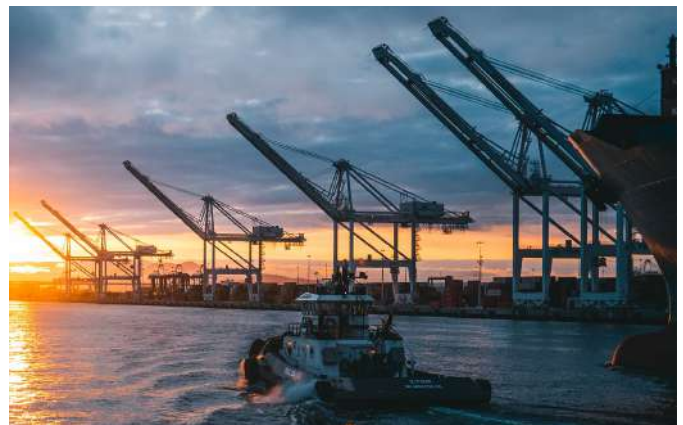

---

## ITG

**ITG** is an optimization system focused on making information readily available with a simple and intuitive web interface, that can be easily personalized by end users. User-friendly charts, icons and color-coding put key data at the forefront, enabling users and managers to see issues that require immediate attention effortlessly.

As a web-based application, **ITG** is designed and optimized for the cloud. There is no hardware to buy and no infrastructure to maintain, thereby lowering the total cost of ownership. The appliance deployment model means implementation is simple and straightforward.

By using globally renowned structures, **ITG** improves user experience and is device responsive. The simplified architecture of **ITG** makes it highly customizable. It's easy to adopt and fine tune, or add more functionalities for a solution which shows familiar to users from the start.

**ITG** enables optimization management tools across systems, through a web-based platform and cloud deployment model; lowering costs, so work teams can focus on their core business.

## The benefits

Standardize information, streamline workflow, improving efficiency and reducing costs.

The result is a single system that:

Reduces job time, resulting in less downtime.

Improves availability, communications and control between groups.

Provides worldwide accessibility, including different system configurations allowing for local or remote hosting, depending on client requirements.

Enables a safer and cleaner work environment. Plus! It is a Green Software, resulting in less energy footprint, paper waste and less resources used. 🌱

## Our Tools

Critical Document Management, controlling and standardizing information throughout the complete task cycle.

Audits and inspections, live in the field.

Notification system, making communications between teams more efficient. Sending out communications to groups, including entry/exit maps and rescue plans for ERT and SMS communication.

Online Training for high risk activities, inductions or other customized courses.
